

Exercise 1. Attribute Closure

Relation (A, B, C, D, E, G) has following functional dependencies:

$AB \rightarrow C$

$C \rightarrow A$

$BC \rightarrow D$

$ACD \rightarrow B$

$D \rightarrow EG$

$BE \rightarrow C$

$CG \rightarrow BD$

$CE \rightarrow AG$

Build Attribute Closure (BD)+

Solution

$\{BD\}$ $D \rightarrow EG$ $\{BDEG\}$ $BE \rightarrow C$ $\{BCDEG\}$ $C \rightarrow A$ $\{ABCDEG\}$

Exercise 2. Functional dependencies

Look at relation Order (ProductNo, ProductName, CustomerNo, CustomerName, OrderDate, UnitPrice, Quantity, SubTotal, Tax, Total)

Tax rate depends on the Product (e.g., 20% for books or 30% for luxury items).

Only one order per product and customer is allowed per day (several orders are combined).

A) Determine the non-trivial functional dependencies in the relation

B) What are the key candidates?

Solution

A)

$\{\text{ProductNo}\} \rightarrow \{\text{ProductName}, \text{UnitPrice}, \text{Tax}\}$

$\{\text{CustomerNo}\} \rightarrow \{\text{CustomerName}\}$

$\{\text{ProductNo}, \text{CustomerNo}, \text{OrderDate}\} \rightarrow \{\text{Quantity}\}$

$\{\text{UnitPrice}, \text{Quantity}\} \rightarrow \{\text{SubTotal}\}$

$\{\text{SubTotal}, \text{Tax}\} \rightarrow \{\text{Total}\}$

$\{\text{ProductName}\} \rightarrow \{\text{ProductNo}\}$

$\{\text{CustomerName}\} \rightarrow \{\text{CustomerNo}\}$

The last two are valid only if the product/customer names are unique.

Because of the correlation between SubTotal, Tax and Total, one could consider the following functional dependencies as well:

$$\{\text{Total}, \text{Tax}\} \rightarrow \{\text{SubTotal}\}$$

$$\{\text{Total}, \text{SubTotal}\} \rightarrow \{\text{Tax}\}$$

B)

$$\{\text{ProductNo}, \text{CustomerNo}, \text{OrderDate}\}$$

$$\{\text{ProductNo}, \text{CustomerName}, \text{OrderDate}\}$$

$$\{\text{ProductName}, \text{CustomerNo}, \text{OrderDate}\}$$

$$\{\text{ProductName}, \text{CustomerName}, \text{OrderDate}\}$$

The last two are valid only if the product/customer names are unique.

Exercise 3. 3NF

Consider relation $R(A, B, C, D)$ with the following functional dependencies:

$$F = \{A \rightarrow D, AB \rightarrow C, AC \rightarrow B\}$$

A) What are all candidate keys?

B) Convert R into 3NF using synthesis algorithm from textbook.

Solution

A)

$$\text{AttrClosure}(F, AB) = \{AB\} \rightarrow \{ABD\} \rightarrow \{ABCD\} \Rightarrow AB \text{ is superkey}$$

$$\text{AttrClosure}(F, A) = \{A\} \rightarrow \{AD\}$$

$$\text{AttrClosure}(F, B) = \{B\}$$

AB is candidate key

$$\text{AttrClosure}(F, AC) = \{AC\} \rightarrow \{ACD\} \rightarrow \{ABCD\} \Rightarrow AC \text{ is superkey}$$

$$\text{AttrClosure}(F, A) = \{A\} \rightarrow \{AD\}$$

$$\text{AttrClosure}(F, C) = \{C\}$$

AC is candidate key

B)

$$A \rightarrow D \Rightarrow R_1 = \{A, D\}$$

$$AB \rightarrow C \Rightarrow R_2 = \{A, B, C\}$$

$$AC \rightarrow B \Rightarrow R_3 = \{A, C, B\}$$

$$R_3 \subseteq R_2 \Rightarrow R_1 = \{A, D\}; R_2 = \{A, B, C\}$$
